

GA TECH THEMED QUARTO TEMPLATE

Antonia Garay

Abstract

Provide a brief summary of the assignment, including objectives, methods, and key findings.

Table of contents

Main Sections for Each Question	2
Methodology	2
Data Pre-Processing	2
Data Processing	3
Summary	3
Key Insights	3
Optional Code(Blocks) Section	3
References	4
Figures & Tables	4
Appendix (Optional)	4

Main Sections for Each Question

Each top-level section is named after the specific question or problem being addressed (e.g., Question ##). This ensures clarity and helps reviewers or graders quickly locate your answers.

You can input references and have them notated as well.[1], [2], [3]

Why use it?

- Mimics the format of assignments where each question is treated as a standalone unit.
- Maintains a clear link between the problem and your analysis.
- Encourages modular thinking for multi-part assignments.

Can use the callout note boxes as a way to list the actual homework question word of word or to call out the information as important.

! You can also nest a callout box so that additional callouts can be made.

Methodology

Purpose: Describe how you approached the problem, including any analytical tools, techniques, or frameworks you used.

Why use it?

- Demonstrates your thought process and analytical rigor.
- Provides enough detail for reproducibility without overwhelming with technical specific

Data Pre-Processing

If using code boxes throughout the report vs at the bottom in one section ensure you import the proper libraries here or before.

```
1 # Library imports
2 library(ggplot2)
3 data(mtcars)
4 library(stats)
5 library(utils)
6 library(reticulate) # to allow python code blocks
```

①

① Can also use annotation not just comments

```
1 import pandas as pd # For data handling
```

Data Processing

Summary

Purpose: Summarize your findings and results in a concise, narrative form.

Why use it?

- Allows readers to grasp your key results without diving into detailed data or visuals.
- Bridges the gap between methodology and insights.

Key Insights

Purpose: Present the actionable insights or conclusions derived from the analysis.

Why use it?

- Focuses on the “so what?” aspect of your work.
- Encourages you to think critically about the implications of your results.

Optional Code(Blocks) Section

Purpose: Include code used for analysis and visualizations.

Why use it?

- Keeps technical implementation separate from the narrative, making the report cleaner and easier to read.
- Ensures your work is reproducible and transparent.

```
1 ggplot(mtcars, aes(x = wt, y = mpg)) +  
2   geom_point() +  
3   labs(title = "Scatterplot: MPG vs. Weight")  
4 ggplot(mtcars, aes(x = factor(cyl))) +  
5   geom_bar(fill = "steelblue") +  
6   labs(title = "Bar Chart: Cylinder Count",  
7         x = "Cylinders",  
8         y = "Count")
```

Figures & Tables

Figures, tables, and their legends, should be included at the end of the document. Figures and tables are easily included with Quarto, e.g. Figure 1 and Table 1. See the relevant Quarto documentation for [figures](#) and [tables](#).

Table 1: Legend (350 words max). Example legend text.

car	color	mgp
mazda	blue	10.4
fiat	read	15.43

Appendix (Optional)

Purpose: Include supplementary materials like extended analyses, additional visualizations, or raw data.

Why use it?

Keeps the main report focused while providing access to detailed information if needed.

Figure 1: Legend (350 words max). Example legend text.
